Oranut Suphatamat (Dao)

Junior Full-Stack Developer | Business / System Analyst
Bangkok, Thailand · oranut43939@gmail.com · github.com/Zynin43839 · linkedin.com/in/oranut-suphantamat-02225635b
Portfolio: dao-portfolio-space.vercel.app

SUMMARY

Junior developer with a research background moving into software, working across the stack and across the delivery: React and Node.js for features, TypeScript with Next.js and Elysia for newer work, and the requirements, data models and tests that keep a release honest. Delivered an AI diary (semantic search, RAG chat, privacy consent) together with a 25-document BA/SA set traced from requirements to test cases.

SKILLS

Languages: JavaScript, TypeScript, SQL, HTML/CSS
Frontend: React, Next.js (App Router), Tailwind CSS, Vite, Framer Motion
Backend: Node.js/Express, Elysia (Bun), REST API design, streaming responses
Data: MongoDB (Mongoose), PostgreSQL, Supabase (Row Level Security, pgvector, HNSW)
Testing & tools: bun test, Postman, Git/GitHub, Vercel, Figma
Practice: Requirements analysis, use cases, C4/DFD/ERD modelling, traceability matrices, measurable NFRs, risk registers, change control

PROJECTS

RAG-Diary | AI diary with semantic search — Solo · Oct 2026
Next.js · Elysia (Bun) · TypeScript · Supabase Postgres + pgvector · OpenAI

- Built the full product: authenticated diary CRUD, automatic embeddings per entry, semantic search, a RAG chat that answers only from the signed-in user's notes, mood summaries and image generation.
- Kept isolation inside the database with four Row Level Security policies on auth.uid() = user_id, so an application bug cannot return another user's row.
- Added a consent gate before any external AI call, revocable from settings, plus JSON export and delete-all for the user's own data (PDPA).
- Wrote the analysis set as 25 documents: 15 functional and 8 quality requirements, 6 use cases, C4 levels 1-3, ERD, DFD levels 0-1, 23 test cases, and a traceability matrix covering 100% of requirements.
- Trimmed the API surface to 12 documented endpoints, validated request bodies, mapped errors to readable messages, and removed sensitive columns from list responses.

Case study: dao-portfolio-space.vercel.app/case-study/rag-diary

HugPaw | Pet supply e-commerce (group project) — Generation Thailand · Aug 2025
React · Node.js/Express · MongoDB · Tailwind CSS

- Built storefront pages for customizable pet products with a responsive layout and reusable components.
- Implemented session authentication with JWT stored in HTTP-only cookies and passwords hashed with bcrypt.
- Added route guarding and role-based permissions across user pages and the cart, with a consistent error shape from the API.
- Designed the user data schema and the navigation flow used across the storefront.

EXPERIENCE

Project Coordinator (Freelance) · Bangkok, Thailand — Jun 2024 – Apr 2025

- Coordinated cross-functional teams preparing learning and technical documents, tracking owners, deadlines and revisions.
- Designed and reviewed training worksheets and internal reports, turning rough notes into material other people could follow.
- Maintained version control and documentation workflows, keeping one source of truth for the team and stakeholders.

Research Assistant & Writer · Fastwork (remote) — Jun 2023 – Jun 2025

- Researched and drafted academic articles in science and social fields, then edited and formatted them for publication.
- Worked to citation and formatting standards, which is the habit I now apply to technical documentation.

EDUCATION

M.Sc. in Biotechnology · Khon Kaen University — GPA 3.11 · Jul 2022
Thesis: Biochemical methane potential of sugarcane leaves and specific methanogenic activity of unacclimatized and acclimatized mixed cultures.

B.Sc. in Biotechnology · Khon Kaen University — GPA 2.94 · Jun 2020
Project: ELISA versus selective medium for detecting bacterial fruit blotch (Acidovorax citrulli).

CERTIFICATIONS

Junior Software Developer Bootcamp · Generation Thailand — Sep 2025
Full-stack track: Node.js, React, MongoDB; agile teamwork, API building, Git.

MongoDB: From the Relational Model to the Document Model · MongoDB University — 2025
Schema design and query optimisation when moving from SQL to documents.

TOEIC Listening & Reading · ETS — 570 / 990
Working proficiency in English for documentation and team communication.

LANGUAGES

Thai (native) · English (TOEIC 570/990, working proficiency)
